1507/1503
Insulation Testers

Safety Information

A Warning identifies conditions and procedures that are dangerous to the user.

⚠️ Warnings

To prevent possible electrical shock, fire, or personal injury:

• Read all safety information before you use the Product.
• Do not alter the Product and use only as specified, or the protection supplied by the Product can be compromised.
• Carefully read all instructions.
• Do not use the Product around explosive gas, vapor, or in damp or wet environments.
• Comply with local and national safety codes. Use personal protective equipment (approved rubber gloves, face protection, and flame-resistant clothes) to prevent shock and arc blast injury where hazardous live conductors are exposed.
• Do not work alone.
• Examine the case before you use the Product. Look for cracks or missing plastic. Carefully look at the insulation around the terminals.
• Do not use the Product if it is altered or damaged.
• Do not use test leads if they are damaged. Examine the test leads for damaged insulation, exposed metal, or if the wear indicator shows. Check test lead continuity.
• Do not touch voltages >30 V ac rms, 42 V ac peak, or 60 V dc.
• Do not apply more than the rated voltage, between the terminals or between each terminal and earth ground.
• Use the correct terminals, function, and range for measurements.
• Use Product-approved measurement category (CAT), voltage, and amperage rated accessories (probes, test leads, and adapters) for all measurements.
• Do not exceed the Measurement Category (CAT) rating of the lowest rated individual component of a Product, probe, or accessory.
• Do not use in CAT III or CAT IV environments without the protective cap installed on test probe. The protective cap decreases the exposed probe metal to <4 mm. This decreases the possibility of arc flash from short circuits.
• Remove all probes, test leads, and accessories that are not necessary for the measurement.
• Keep fingers behind the finger guards on the probes.
• Measure a known voltage first to make sure that the Product operates correctly.
• Always de-energize circuits before you do resistance tests.
• Replace a blown fuse with exact replacement only for continued protection against arc flash.
• Remove the batteries if the Product is not used for an extended period of time, or if stored in temperatures above 50 °C. If the batteries are not removed, battery leakage may result.
• Replace the batteries when the low battery indicator shows to prevent incorrect measurements.
• Remove all probes, test leads, and accessories before the battery door is opened.
• Replace all batteries with fresh batteries of the same manufacturer and type to prevent battery leakage.
• Repair the Product before use if the battery leaks. Battery leakage may create a shock hazard or damage the Product.
• The battery door must be closed and locked before you operate the Product.
• Do not operate the Product with covers removed or the case open. Hazardous voltage exposure is possible.
• Have an approved technician repair the Product.
Specifications

Maximum Voltage between any
Terminal and Earth................. 600 V

Batteries ................................. Four AA batteries (IEC LR6)

Storage Temperature ............. -40 °C to 60 °C

Operating Temperature .......... -20 °C to 55 °C

Temperature Coefficient........ 0.05 x (specified accuracy) per °C for
                                 temperatures <18 °C or >28 °C

Relative Humidity .............. Noncondensing
                                 0 % to 95 % @ 10 °C to 30 °C
                                 0 % to 75 % @ 30 °C to 40 °C
                                 0 % to 40 % @ 40 °C to 55 °C

Altitude

Operating......................... 2000 m

Storage............................... 12 000 m

Safety

General............................... IEC 61010-1: Pollution Degree 2

Measurement ..................... IEC 61010-2-030; CAT IV 600 V
                                 IEC 61010-031, IEC 61557-1,
                                 IEC 61557-2, IEC 61557-4,
                                 IEC 61557-10

Electromagnetic Compatibility (EMC)

International..................... IEC 61326-1: Portable
                                 Electromagnetic Environment
                                 CISPR 11: Group 1, Class A

Group 1: Equipment has intentionally generated and/or uses
conductively-coupled radio frequency energy that is necessary
for the internal function of the equipment itself.

Class A: Equipment is suitable for use in all establishments
other than domestic and those directly connected to a low-
voltage power supply network that supplies buildings used for
domestic purposes. There may be potential difficulties in
ensuring electromagnetic compatibility in other environments
due to conducted and radiated disturbances.

Korea (KCC)....................... Class A Equipment (Industrial
                                 Broadcasting & Communication
                                 Equipment)

Class A: Equipment meets requirements for industrial
electromagnetic wave equipment and the seller or user should
take notice of it. This equipment is intended for use in business
environments and not to be used in homes.

USA (FCC) ......................... 47 CFR 15 subpart B. This product is
                                 considered an exempt device per
                                 clause 15.103.
