Accuracy, FLUKE 190-xx2
- DC coupled:
  - DC to 60 Hz: ±(1.5 % +10 counts)
- AC coupled, low frequencies:
  - Below 100 Hz there is signal loss that must be included. These are the expected loss at 2 common frequencies.
    - 50 Hz direct (1:1): - 0.6%
    - 60 Hz direct (1:1): - 0.4%
  - Apply this loss and then the DC coupled accuracy. With the 10:1 probe the low frequency roll-off point will be lowered to 2 Hz, which improves the AC accuracy for low frequencies. When possible use DC coupling for maximum accuracy.

  - 20 kHz to 1 MHz: ±(5 % + 20 counts)
  - 1 MHz to 25 MHz: ±(10 % + 20 counts)
  - For higher frequencies the instrument’s frequency roll-off starts affecting accuracy.

**Vpwm**
Purpose: to measure on pulse width modulated signals, like motor drive inverter outputs
Principle: readings show the effective voltage based on the average value of samples over a whole number of periods of the fundamental frequency
Accuracy: as Vrms for sinewave signals

**Note**
AC motors are designed for use with a rotating magnetic field of constant strength. This strength depends on the applied voltage (Vpwm) divided by the fundamental frequency of the applied voltage (Hz). The nominal Volt and Hz values are shown on the motor type plate.

**Interface Ports**
Two USB ports provided. Ports are fully insulated from instrument’s floating measurement circuitry:

- A USB-host port directly connects to external flash memory drive (‘USB-stick’, ≤2 GB) for storage of waveform data, measurement results, instrument settings and screen copies.
- A mini-USB-B is provided which allows for interconnection to PC for remote control and data transfer using SW90W (FlukeView™ software for Windows ™).
- One port can be active at the same time, so remote control and data transfer via mini-USB is not possible when saving or recalling data to or from the USB-stick.

**10:1 Probe VPS410**

**Accuracy**
Probe accuracy when adjusted on the test tool:

- DC to 20 kHz ...................................... ±1 %
- 20 kHz to 1 MHz ................................... ±2 %
- 1 MHz to 25 MHz ................................... ±3 %

For higher frequencies the probe’s roll-off starts affecting the accuracy.

For further probe specifications see the instruction sheet supplied with the VPS410 probe set.
