LIMITED WARRANTY AND LIMITATION OF LIABILITY

This Fluke product will be free from defects in material and workmanship for three years from the date of purchase. This warranty does not cover fuses, disposable batteries, or damage from accident, neglect, misuse, alteration, contamination, or abnormal conditions of operation or handling. Resellers are not authorized to extend any other warranty on Fluke’s behalf. To obtain service during the warranty period, contact your nearest Fluke authorized service center to obtain return authorization information, then send the product to that Service Center with a description of the problem.

THIS WARRANTY IS YOUR ONLY REMEDY. NO OTHER WARRANTIES, SUCH AS FITNESS FOR A PARTICULAR PURPOSE, ARE EXPRESSED OR IMPLIED. FLUKE IS NOT LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES OR LOSSES, ARISING FROM ANY CAUSE OR THEORY. Since some states or countries do not allow the exclusion or limitation of an implied warranty or of incidental or consequential damages, this limitation of liability may not apply to you.

**Introduction**

⚠️⚠️Warning

Read “Safety Information” before you use the Meter.

The Fluke 381 is a handheld, battery-operated Clamp Meter (the Meter) that has a remote-display module and detachable iFlex (Flexible Current Probe). The Remote Display can be removed from the Meter body and read away from the measurement source. This lets the display be easily read in difficult-measurement situations such as a hazardous environments, or very tight spaces. The Flexible Current Probe makes it possible to measure higher current (up to 2500 A ac) and larger cables that traditional jawed meters cannot measure.

**How to Contact Fluke**

To contact Fluke, call one of the following telephone numbers:

- Technical Support USA: 1-800-44-FLUKE (1-800-443-5853)
- Calibration/Repair USA: 1-888-99-FLUKE (1-888-993-5853)
- Canada: 1-800-36-FLUKE (1-800-363-5853)
- Europe: +31 402-675-200
- Japan: +81-3-3434-0181
381
Users Manual

- Singapore: +65-738-5655
- Anywhere in the world: +1-425-446-5500

Or, visit Fluke's website at www.fluke.com.

To see, print, or download the latest manual supplement, visit http://us.fluke.com/usen/support/manuals.

Safety Information

A Warning identifies conditions and actions that pose hazard(s) to the user; A Caution identifies conditions and procedures that could cause Meter damage, equipment under test damage, or permanent loss of data.

Symbols used on the Meter and in this manual are explained in Table 1.

⚠️⚠️Warning

To prevent possible electrical shock or personal injury, follow these guidelines:

- Use the Meter only as specified in this manual or the protection provided by the Meter can be compromised.
- Examine the case before you use the Meter. Look for cracks or missing plastic. Carefully look at the insulation around the connectors.
- Never measure ac current while the test leads are inserted into the input jacks.
- Make sure the battery door is closed and latched before operating the Meter.
- Remove the test leads from the Meter before the battery door is opened.
Remote Display True-rms Clamp Meter
Safety Information

- Examine the test leads for damaged insulation or exposed metal. Check test lead continuity. Replace damaged test leads before using the Meter.
- Do not use the Meter if it operates incorrectly. Protection can be compromised. When in doubt, have the Meter serviced.
- Do not use the Meter around explosive gas, vapor or in damp or wet environments.
- Use only type AAA batteries, properly installed in the Meter case, to power the Meter.
- To avoid false readings that can lead to electrical shock and injury, replace the batteries as soon as the low battery indicator (meter \( \) or remote \( \) ) appears.
- When servicing the Meter, use only specified replacement parts. See Table 5.
- Have the Meter serviced only by qualified service personnel.
- Be careful around voltages > 30 V ac rms, 42 V ac peak, or 60 V dc. Such voltages pose a shock hazard.
- Do not apply more than the rated voltage, as marked on the Meter, between the terminals or between any terminal and earth ground.
- When using the probes, keep fingers behind the finger guards on the probes.
- Connect the common test lead before connecting the live test lead. When disconnecting test leads, disconnect the live test lead first.
- Do not work alone so assistance can be rendered in an emergency.
Use extreme caution when working around bare conductors or bus bars. Contact with the conductor could result in electric shock.

Adhere to local and national safety codes. Individual protective equipment must be used to prevent shock and arc blast injury where hazardous live conductors are exposed.

When measuring, keep fingers behind the Tactile Barrier. See Figure 2.

Disconnect circuit power and discharge all high-voltage capacitors before you do diode tests or measure resistance, continuity, or capacitance.

Do not measure ac/dc current in circuits carrying more than 1000 V or 1000 A with the Meter Jaw.

Never operate the Meter with the back cover removed or the case open.

Do not measure ac current in circuits carrying more than 1000 V or 2500 A with the Flexible Current Probe.

Do not apply the Flexible Current Probe around or remove from HAZARDOUS LIVE conductors.

Take special care during fitting and removal of the Flexible Current Probe. De-energize the installation under test or wear suitable protective clothing.

⚠️ Caution

To avoid possible damage to the Meter or to equipment under test:

- Use the proper jacks, function, and range for the measurement application.

**Note**

The Measurement Category (CAT) and voltage rating of any combination of test probe, test probe accessory, current clamp accessory, and the Meter is the LOWEST rating of any individual component.
Remote Display True-rms Clamp Meter
Radio Frequency Data

Radio Frequency Data

Note

Changes or modifications to the wireless 2.4 GHz radio not expressly approved by
Fluke Corporation could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the two conditions
that follow:
1. This device can not cause interference.
2. This device must accept any interference, including interference that can cause undesired
   operation of the device.

Class B digital device: A digital device that is marketed for operation in a residential environment
not withstanding use in commercial, business and industrial environments. Examples of such
devices include, but are not limited to, personal computers, calculators, and equivalent electronic
devices that are marketed for operation by the general public.

The Meter was tested and found to comply with the limits for a Class B digital device, pursuant to
Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against
harmful interference in a residential installation. This equipment generates, uses, and can radiate
radio frequency energy and, if not installed and used in accordance with the instructions, can
cause harmful interference to radio communications. However, there is no guarantee that
interference will not occur in a particular installation. If this equipment does cause harmful
interference to radio or television reception, which can be determined by turning the equipment
off and on, the user is encouraged to try to correct the interference by one or more of the measures that follow:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Consult the dealer or an experienced radio/TV technician for help.

The term "IC: " before the radio certification number only signifies the device meets Industry's Canada technical specifications.

Features

The following sections explain the Meter features in detail. See Figure 2 and Table 2.

Remote Display

The Meter uses low-power 802.15.4 wireless technology to let the display module operate in a different location than the Meter base. Although there is control of some Meter functions (Hold, MIN MAX AVG, and Backlight), complete remote control of the Meter is not available through the display module.

The wireless radio signal does not hinder Meter measurements. Usually, the radio signal is off when the display module is docked to the Meter base. It is possible for the radio signal to be on when the display module is docked and the Rotary Function Switch is set to OFF. To make sure that the radio signal is off, remove the batteries from the Meter base and display module.

The display module is synchronized with a Meter base when it is docked on the Meter base and turned on. Different display modules can be synchronized with a Meter base but, only one display module can be synchronized to a Meter base at the same time.
Remote Display True-rms Clamp Meter

Features

The Meter base and display can be a maximum of 10 meters from each other before the radio signal connection is broken. This distance can change with the obstacles between the Meter base and display. There is a radio connection when \( \square \) shows in the display.

To detach the display from the Meter base, see Figure 1.

Figure 1. Remote Display
Hazardous Voltage Indicator
When the Meter senses a voltage ±30 V or a voltage overload (OL), \( \hat{V} \) is shown on the display and the red high-voltage LED (\( \Delta \)) on the Meter base illuminates to tell you a hazardous voltage is at the Meter input.

Flexible Current Probe

⚠️ Warning

To avoid electrical shock, do not apply or remove from live hazardous conductors.

The high-performance AC Flexible Current Probe utilizes the Rogowski principle and is used for accurate, non-intrusive measurement of sinusoidal, pulsed, and other complex waveforms. The flexible and lightweight measuring head allows quick and easy installation in hard-to-reach areas and works well with large conductors.

For more information about the Flexible Current Probe, see “Current Measurement (Flexible Current Probe)”.

Auto Power Off

The Meter powers off if there is no button push or Rotary Function Switch operation for 20 minutes. If the Meter powers off, turn the Rotary Function Switch OFF and then back on again. Auto Power Off is disabled during Min Max Avg function use. To disable the Auto Power Off, hold down \( \Box \) while turning on the Meter.
Remote Display True-rms Clamp Meter

Features

Backlight
Push \[ \textcircled{\small{D}} \] to toggle the Backlight on and off. The Backlight automatically goes off after 2 minutes. To disable the Backlight Auto Off feature, hold down \[ \textcircled{\small{D}} \] while turning on the Meter.

Display Hold
To capture and hold the present display reading, push \[ \textcircled{\small{H}} \] while taking a reading. Push \[ \textcircled{\small{H}} \] again to return to the live reading.

MIN MAX AVG
Min Max Avg mode can capture the minimum, maximum, and average readings of a given output signal over an extended time.
Push \[ \textcircled{\small{M}} \] to enter Min Max Avg mode, push again to toggle between min and max readings. Push a third time to display the average reading. To exit Min Max Avg mode, push and hold \[ \textcircled{\small{M}} \] for 2 seconds. When Min Max Avg mode is active, the Auto Power Off feature is disabled.

DC Current Zero
Push \[ \textcircled{\small{C}} \] to remove any dc offset that could affect the accuracy of dc readings.
Inrush

Inrush Current is surge current that occurs when an electrical device is first powered on. The Meter can capture this surge current reading. Current spikes from motor drives are one example of such an event. The Inrush function takes approximately 400 samples over a 100 ms period and calculates the starting current envelope.

Low Battery Indicators

The Meter uses two low battery symbols: meter and remote. When meter appears, the batteries in the Meter base should be changed. Low batteries on the Meter base will affect the readings. When remote is displayed, the batteries for the removable display should be changed. Measurements are not affected by low batteries in the display.

Remote Display True-rms Clamp Meter
Measurements

Measurements

Prior to first use, remove the battery isolator (small piece of plastic between the batteries and battery contacts).

AC and DC Current (Jaw)

⚠️ ⚠️ Warning

To avoid electric shock or personal injury:
- When making current measurements, disconnect the test leads from the Meter.
- Keep fingers behind Tactile Barrier. See Figure 2 and Table 2.

Note

When measuring current, center the conductor in the Jaw using the alignment marks on the Jaw.

Before taking dc measurements, push \( \text{zero} \) to ensure correct readings. Zeroing the Meter removes dc offset from the reading. The Zero function works only in the dc current measurement Rotary Function Switch position.
Before zeroing the Meter, make sure the Jaws are closed and there is no conductor inside the Jaw.

To measure ac or dc current:
1. Turn the Rotary Function Switch to the proper function. You should see X on the display, indicating that the measurement is coming from the Jaw.

   Note
   When the measured current is < 0.5 A, the center dot in the display icon A will flash on and off. With current > 0.5 A, the center dot will be steady.

2. If measuring dc, wait for the display to stabilize and then push Z to zero the Meter.
3. Open the Jaw by pressing the Jaw Release and insert the conductor into the Jaw.
4. Close the Jaw and center the conductor using the alignment marks.
5. View the reading on the display. See Figure 4.

   Note
   Current flowing in opposite directions cancels each other. If current is moving in opposite directions, place one conductor into the clamp at a time. See Figure 4.
Remote Display True-rms Clamp Meter

Measurements

Figure 4. Current Measurement with Jaw
AC Current (Flexible Current Probe)

⚠️ Warning

To prevent possible electrical shock or personal injury:

Do not apply the Flexible Current Probe around or remove from HAZARDOUS LIVE conductors. Take special care during fitting and removal of the Flexible Current Probe. De-energize the installation under test or wear suitable protective clothing.

To use the Flexible Current Probe, follow these instructions:

1. Connect the Flexible Current Probe to the Meter. See Figure 5.
2. Connect the flexible part of the Flexible Current Probe around the conductor. If opening the end of the Flexible Current Probe to make the connection, make sure that you close and latch it. See the detail in Figure 5. You should be able to hear and feel the Flexible Current Probe lock snap into place.
   
   Note
   
   When measuring current, center the conductor in the Flexible Current Probe. If possible, avoid taking measurements close to other current-carrying conductors.

3. Keep the probe coupling more than 2.5 cm (1 inch) away from the conductor.

4. Turn the Rotary Function Switch to \( \text{D} \). When the Rotary Function Switch is in the correct position, \( \text{Y} \) shows on the display, meaning that the readings are coming from the Flexible Current Probe.
Remote Display True-rms Clamp Meter

Measurements

Note

When the measured current is < 0.5 A, the center dot in the display icon (A) will flash on and off. With current > 0.5 A, the center dot will be steady.

5. Observe the current value on the Meter display.
If the Flexible Current Probe does not perform as expected:
1. Inspect the coupling system to make sure that it is connected and closed correctly or for any damage. If any foreign material is present, the coupling system will not close properly.
2. Inspect the cable between the Flexible Current Probe and the Meter for any damage.
3. Check that the Rotary Function Switch of the Meter is in the correct position (IP (A)).

AC and DC Voltage

To measure ac or dc voltage:
1. Turn the Rotary Function Switch to the proper voltage function (V or V).
2. Connect the black test lead to the COM terminal and the red test lead to the terminal. See Figure 6.
3. Measure the voltage by touching the probes to the desired test points of the circuit. View the reading on the display.
Figure 5. Flexible Current Probe Connection
Figure 6. Measurement with Test Leads (AC Voltage Shown)
Resistance/Continuity

To measure resistance or continuity:
1. Turn the Rotary Function Switch to $\Omega$.
2. Remove power from the circuit being tested.
3. Connect the black test lead to the COM terminal and the red test lead to the VΩ terminal.
4. Measure the resistance by touching the probes to the desired test points of the circuit.
5. View the reading on the display.

If the resistance is < 30 $\Omega$, continuity is indicated by a beeper continuously sounding. If the display reads OL, the circuit is open.

Inrush Current Measurement (Jaw and Flexible Current Probe)
The Meter can capture the initial inrush current when starting a device such as a motor or light ballast. To measure the inrush current:
1. With the device under test off, turn the Meter Rotary Function Switch to $A$, $\Omega A$, or $\Omega V$ if the Flexible Current Probe is being used for the measurement.
2. Center the Jaw or Flexible Current Probe around the device’s live wire.
3. Push $\square$ on the Meter.
4. Turn on the device under test. The inrush current (spike) is displayed on the Meter display. See Figure 7.
Remote Display True-rms Clamp Meter

Measurements

Figure 7. Inrush Current Measurement
Frequency Measurement (Jaw and Flexible Current Probe)

To measure frequency:
1. Turn the Meter Rotary Function Switch to $A$ or $D$ if the Flexible Current Probe is being used for the measurement.
2. Center the Jaw or Flexible Current Probe around the measurement source.
3. Push $Z$ on the Meter to shift to Hz. The frequency is displayed on the Meter display.

Maintenance

⚠️⚠️ Warning

To avoid possible electric shock or personal injury, repairs or servicing not covered in this manual should be performed only by qualified personnel.

Cleaning the Meter and Flexible Current Probe

⚠️⚠️ Warning

To avoid electrical shock, remove any input signals before cleaning.

⚠️ Caution

To avoid damaging the Meter, do not use aromatic hydrocarbons or chlorinated solvents for cleaning. These solutions will react with the plastics used in the Meter. Do not immerse the Meter in water.

Clean the instrument case with a damp cloth and mild detergent.
**Battery Replacement**

To replace the batteries in the Meter body, see Figure 8:
1. Turn the Meter OFF.
2. Use a flat head screwdriver to loosen the battery compartment door screw on the Meter base, and remove the door from the case bottom.
3. Remove the batteries.
4. Replace the batteries with three new AAA batteries.
5. Reattach the battery compartment door to the case bottom and tighten the screw.

To replace the batteries in the display module, see Figure 8:
1. Turn the Meter off.
2. Using the two latches on the side of the Meter, remove the display module.
3. On the bottom of the display module, there is a flat section in the center of the module. With your thumb, push down and slide the door towards you to open the battery compartment,
4. Remove the batteries.
5. Replace the batteries with two new AAA batteries.
6. Slide the battery door back into place.
7. Dock the Display Module with the Meter base and turn the Meter on.

Range ................................................. 5.0 – 500.0 Hz
Resolution ........................................... 0.1 Hz
Accuracy ............................................. 0.5 % ± 5 digits
Trigger Level ................................. 5 – 10 Hz, ≥10 A
                                  10 – 100 Hz, ≥5 A
                                  100 – 500 Hz, ≥10 A
Remote Display True-rms Clamp Meter
Specifications

**Frequency via Flexible Current Probe**
- Range: 5.0 to 500.0 Hz
- Resolution: 0.1 Hz
- Accuracy: 0.5 % ± 5 digits
- Trigger Level:
  - 5 to 20 Hz, ≥ 25 A
  - 20 to 100 Hz, ≥ 20 A
  - 100 to 500 Hz, ≥ 25 A

**Resistance**
- Range: 600 Ω/6 kΩ/60 kΩ
- Resolution: 0.1 Ω/1 Ω/10 Ω
- Accuracy: 1 % ± 5 digits

**Mechanical Specifications**
- Size (L x W x H): 277 mm * 88 mm * 43 mm (55 mm for remote unit)
- Weight: 350 g
- Jaw Opening: 34 mm
- Flexible Current Probe Diameter: 7.5 mm
Flexible Current Probe Cable Length
(head to electronics connector) .......... 1.8 m

**Environmental Specifications**

Operating Temperature .................. -10 °C to +50 °C
Storage Temperature ...................... -40 °C to +60 °C
Operating Humidity ....................... Non condensing (< 10 °C)

≤ 90 % RH (at 10 °C to 30 °C)
≤ 75 % RH (at 30 °C to 40 °C)
≤ 45 % RH (at 40 °C to 50 °C)
(Without Condensation)

Operating Altitude ...................... 2000 meters
Storage Altitude ......................... 12,000 meters

                                      ETSI EN 300 328 V1.7.1:2006
                                      ETSI EN 300 489 V1.8.1:2008
                                      FCC Part 15 Subpart C Sections 15.207, 15.209, 15.249
                                      FCCID: T68-F381
Remote Display True-rms Clamp Meter
Specifications

RSS-210 IC: 6627A-F381

Temperature Coefficients
Add 0.1 x specified accuracy for each degree C above
28 °C or below 18 °C

Wireless Frequency
2.4 GHz ISM Band 10 meter range

Safety Compliance
ANSI/ISA S82.02.01:2004
CAN/CSA-C22.2 No. 61010-1-04
IEC/EN 61010-1:2001 to 1000V CAT III, 600V CAT IV.

Double Insulation Clearance
Per IEC 61010-2-032

Double Insulation Creepage
Per IEC 61010-1

Agency Approvals
