Fluke 805 FC
Vibration Meter

The reliable, repeatable, accurate way to check bearings and machine health.

Make go or no-go maintenance decisions with confidence. The Fluke 805 FC Vibration Meter is the most reliable vibration screening device available for frontline mechanical troubleshooting teams that need repeatable, severity-scaled readings of overall vibration, bearing health and machine health.

What makes the Fluke 805 FC the most reliable vibration screening device available?

• Innovative sensor design minimizes measurement variations caused by device angle or contact pressure
• Consistent data quality at both low and high frequency ranges
• Four-level severity scale assesses urgency of problems for overall vibration and bearing condition
• Exportable data via USB or wirelessly, through the Fluke Connect® mobile app
• Trending in Microsoft® Excel using pre-built templates
• Overall vibration measurement (10 Hz to 1,000 Hz) for acceleration, velocity and displacement units of measurement for a wide variety of machines
• Crest Factor+ technology provides reliable bearing assessment using direct sensor tip measurements between 4,000 Hz and 20,000 Hz
• Get authorization to take next steps in an instant if machine health is at risk via Fluke Connect® mobile app
• Colored lighting system (green, red) and on-screen comments indicate how much pressure needs to be applied to take measurements
• Temperature measurement with Spot IR Sensor increases diagnostic capabilities
• On-board memory holds and saves up to 3,500 measurements
• External accelerometer (optional) support for hard to reach locations
• Flashlight for viewing measurement locations in dark areas
• Large screen with high resolution for easy navigation and viewing

*Within provider’s wireless service area.

Fluke Connect compatible

View data locally on the meter, or via Fluke Connect mobile app.
Manage and monitor workflow for better maintenance results

Using the Fluke Connect Mobile App it’s now easier than ever to manage your vibration screening workflow. Integrated machine profile functionality allows you to set up machine profiles using the app and then push them directly to your 805 FC Vibration Meter. Users can then use the list of machine profiles to create work orders, and develop route based maintenance schedules which can be dynamically sent to technicians in field, helping to ensure the proper focus on critical assets. Once a machine is tested, the 805 FC communicates the results directly to the app and associates them with the proper profile and route. This data can easily be shared between teams so you can make better maintenance decisions.

What is Crest Factor +?
Fluke 805 FC with Crest Factor + takes the confusion out of bearing assessment

The original Crest Factor is used by vibration analysts to identify bearing faults. It is defined as the ratio of the peak value/RMS value of a time domain vibration signal.

A key limitation of using Crest Factor to identify bearing faults is that the Crest Factor does not increase linearly as the bearing degrades. In fact, the Crest Factor can actually decrease as a bearing nears catastrophic failure due to large RMS values.

In order to overcome this limitation, Fluke uses a proprietary algorithm known as Crest Factor + (CF+). CF+ values range from 1 to 16. As the bearing condition worsens, the CF+ value increases. To keep things simple, Fluke has also included a four-level severity scale that identifies the bearing health as Good, Satisfactory, Unsatisfactory, or Unacceptable.

Exporting and trending with the 805 FC

Export and trend in Excel

Trending, or repeated vibration measurements kept in a spreadsheet over time, is the best method to track machine health. With 805 FC you can easily:

- Export your result to Excel through USB connection
- Trend the readings with the pre-built Excel templates and plot graphs
- Compare the overall vibration readings to ISO Standards (20816-1, 20816-3, 20816-7)

Import measurements from the 805 FC Vibration Meter to an Excel template on your PC in order to trend the bearing parameters: overall vibration, CF+, and temperature. Looking at just the number alone for the overall vibration or bearing impact might not be of much benefit to the operator or technician if they don’t know what the number means. The user may not know what is normal or what indicates a problem.

If measurements taken on the operator rounds are loaded into Excel, then the trend will show patterns of something that is becoming abnormal. The user can now see a clear picture of the changing bearing condition and health of the machine.
Use the Fluke 805 FC Vibration Meter to check these machine categories:

**Chiller (refrigeration)**
- Reciprocating (Open motor and compressor separate)
- Reciprocating (Hermetic motor and compressor)
- Centrifugal (Hermetic or Open Motor)

**Fans**
- Belt-driven fans 1800 RPM to 3600 RPM
- Belt-driven fans 600 RPM to 1799 RPM
- General direct drive fans (direct coupled)
- Vacuum blowers (belt or direct drive)
- Large forced draft fans (fluid film bearings)
- Large induced draft fans (fluid film bearings)
- Shaft-mounted integral fan (extended motor shaft)
- Axial flow fans (belt or direct drive)

**Cooling tower drives**
- Long, hollow drive shaft (motor)
- Belt drive (motor and fan—all arrangements)
- Direct drive (motor and fan—all arrangements)

**Centrifugal pumps** (Note: height is measured from grade to top motor bearing)
- Vertical pumps (12 ft to 20 ft height)
- Vertical pumps (8 ft to 12 ft height)
- Vertical pumps (5 ft to 8 ft height)
- Vertical pumps (0 ft to 5 ft height)
- Horizontal centrifugal end suction pumps—direct coupled
- Horizontal centrifugal double suction pumps—direct coupled
- Boiler feed pumps (turbine or motor driven)

**Positive displacement pumps**
- Positive displacement horizontal piston pumps (under load)
- Positive displacement horizontal gear pumps (under load)

**Air compressors**
- Reciprocating
- Rotary screw
- Centrifugal with or without external gearbox
- Centrifugal—internal gear (axial meas.)
- Centrifugal—internal gear (radial meas.)

**Blowers**
- Lobe-type rotary blowers (belt or direct drive)
- Multi-stage centrifugal blowers (direct drive)

**Generic gearboxes (rolling element bearings)**
- Single stage gearbox

**Machine tools**
- Motor
- Gearbox input
- Gearbox output
- Spindles—roughing operations
- Spindles—machine finishing
- Spindles—critical finishing
## Technical specifications

### Vibration meter

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low frequency range (overall measurement)</td>
<td>10 Hz to 1,000 Hz</td>
</tr>
<tr>
<td>High frequency range (CF+ measurement)</td>
<td>4,000 Hz to 20,000 Hz</td>
</tr>
<tr>
<td>Severity levels</td>
<td>Good, Satisfactory, Unsatisfactory, Unacceptable</td>
</tr>
<tr>
<td>Vibration limit</td>
<td>50 g peak [100 g peak-peak]</td>
</tr>
<tr>
<td>A/D converter</td>
<td>16-bit</td>
</tr>
<tr>
<td>Signal to noise ratio</td>
<td>80 dB</td>
</tr>
</tbody>
</table>

### Sampling rate

<table>

*RF connection time (binding time) can take up to 1 minute.
Ordering information

**Fluke-805 FC Vibration Meter**

**Includes**
805 FC Vibration Meter, USB cable, storage case, belt holster, quick reference guide, CD-ROM (includes MS Excel template and documentation), and four AA batteries

**Fluke-805ES External Sensor**

**Includes**
External vibration sensor with threaded mounting bolt, removable “U” shaped magnet mount and 7 ft coiled cable
