Recommended oil and gas tools

Multifunction process calibrators

Best suited for:

- Calibrating and maintaining process instrumentation and control systems
- Troubleshooting 4-20 mA loops, temperature, pressure, frequency and transmitters in one tool
- Performing HART transmitter adjustment

Pressure calibrators

Best suited for:

- Pressure calibration of transmitters, gauges, switches and custody transfer meters
- · Maintenance of almost any pressure device using pressure sourcing and mA measurements
- Calibrating P/I instruments with simultaneous pressure and current measurement

Earth ground testers

Best suited for:

- Earth resistance loop and soil resistivity testing
- Ensuring safety of personnel and proper operation of equipment
- Diagnosing intermittent electrical problems related to poor earth grounding

Thermal imagers

Best suited for:

- Inspecting pipes, motors and pumps
- · Capturing and troubleshooting tank levels
- Quickly detecting "hot spots" in hard-to-reach electrical panels

Process clamp meters

Best suited for:

- Measuring 4-20 mA signals without "breaking the loop" in process controls systems
- Sourcing 4-20 mA signals for testing control system I/O or I/Ps
- Measuring 10-50 mA signals in older control systems using the 99.9 mA range
- Taking measurements in hard-to-reach and hard-to-see areas

Digital multimeters

Best suited for:

- · Measurement in and around highly-explosive environments
- Rugged, waterproof, dust-proof and drop-proof work in oil and gas environments
- Intrinsically safe testing and troubleshooting
- Use with switchgear, motors, variable speed drives, generators, electrical systems and cables

Vibration tester

Best suited for:

- · Predictive and condition-based maintenance
- Identifying root cause and diagnosing severity of machine's condition
- Prioritizing critical repair and replacement options
- Use with motors, pumps, fans, compressors, belt/chain drives, gearboxes and spindles
