Fluke power quality and energy tools

Fluke offers an extensive range of power quality test tools for troubleshooting, preventive maintenance, and long-term recording and analysis in industrial, utilities and commercial building applications.

**Power quality troubleshooters and analyzers:**
Dedicated power and power quality meters for single-phase and three-phase frontline power quality troubleshooting with load studies, energy waste analysis and quality of service compliance testing. Along with models for advanced power quality and motor analyzers for predictive maintenance.

**Power quality and energy loggers:**
Power and Energy loggers for characterizing power quality, conducting energy and load studies and capturing hard-to-find voltage events over a user-defined period of time.

**Power quality recorders:**
Advanced power quality recorders for capturing comprehensive details of power disturbances including waveforms, trend analysis and Class-A ‘quality-of-service’ compliance testing over long period of time to capture the most difficult to trace problems.
## Choose the right tool for the job.

### Troubleshooters and analyzers

- **Loggers**
- **Recorders**

### Application use

<table>

</tr>
</tbody>
</table>

### Energy studies
- Measure V, I, W, Cw, Dpf, Hz
- Measure ROC/RAV and AVO values

### Energy studies
- Get detailed power and energy consumption profiles during energy audits and pinpoint savings opportunities.

### 10 day logging
- Monitor energy consumption over a 10 day period.

### Waste energy monetization
- Calculate the savings potential of unused energy.

### Basic harmonics study
- Measure harmonics 1 to 25 for V & I
- Discover the source of distortion in your installation, so that you can filter those loads or move them to separate circuits.

### Advanced harmonics study
- Full harmonic spectrum
- If distorting loads are causing problems in your installation, you need comprehensive data to identify the source and create a solution.

### Power harmonics
- Measure power harmonics 1 to 25 for V & I

### Basic industrial PQ troubleshooting
- Oscilloscope function
- When troubleshooting in the field, graphical data enables you to trace the source of the problem at hand.

### Advanced PQ troubleshooting
- Comprehensive logging capability
- Complex installations often require a deeper dive into measurement data. Multiple loads may be interacting randomly to cause a single problem.

### Advanced Features
- **Inrush**
  - Discover peak current from load switching.
- **Flicker**
  - Measure the effects of disturbing switching equipment.
- **Transients**
  - Capture high speed voltage transients caused by switching or network disturbances.
- **Malfunction**
  - Monitor signals on the network that are used for network-wide equipment control.
- **Power wave**
  - Capture voltage and current waveforms over defined periods to discover the effects of motor and generator startups.
- **Dip waveform capture**
  - Visualize the dips and swells to identify the cause of the events.
- **400 Hz**
- **Shipboard power**
  - Quantify shipboard power against defined international standards.
- **Power inverter efficiency**
  - Measure input and output power of inverters to optimize system performance.

### Motor analysis
- **Speed, torque, mechanical power, efficiency**
  - Perform dynamic motor assessment by plotting of motor de-rating factor against load according to NEMA/IEC guidelines on direct on-line electric motors and motors driven by specified variable frequency drive systems.

### Communications
- **USB**
- **Ethernet**
- **Wireless download**
  - 1734²
- **Fluke Connect app**

### Safety
- **600 V CAT IV**
- **600 V CAT III**
- **300 V CAT II**

### Safety
- **600 V CAT IV**
- **600 V CAT III**
- **300 V CAT II**

---

¹An upgrade package is available to upgrade an existing 1732 Energy Logger with the same features and capabilities of the 1734 Energy Logger.
²An upgrade package is available to upgrade an existing 1738 Power Logger with the same features and capabilities of the 1738 Advanced Power Logger.
³Event waveform capture (10.24kHz sampling).
⁴Not available in Europe.
Application software

Each Fluke power quality product includes powerful application software that enables you to change measurement data into valuable reports that can be shared with key stakeholders to develop solutions. Each software package includes reporting tools that create valuable insights into the performance of your electrical system.

Out-of-the-box solutions for energy optimization and power quality

Fluke tools will help you troubleshoot, record, and analyze power quality and energy parameters with speed and confidence.

Every Fluke energy optimization and power quality tool is a solution beginning with an intuitive user interface that makes advanced features easy to access. Flexible and powerful software is included with each tool, at no extra cost. Fluke offers a comprehensive line of troubleshooters, power and energy loggers, and recorders to handle a broad range of power quality applications. But how do you know which tool is right for which job? Use the quick reference guide below to identify the right tool for the problems you’re experiencing.

Why use one?

<table>
<thead>
<tr>
<th>Troubleshooters and analyzers</th>
<th>Loggers</th>
<th>Recorders</th>
</tr>
</thead>
<tbody>
<tr>
<td>These instruments include a live display when immediate access to the diagnostic information is needed.</td>
<td>Loggers are the basic tools for creating energy usage profiles used in monitoring and targeting. You can also use a power quality logger to validate voltage quality and look for general trends in the power quality.</td>
<td>Many problems can’t be found immediately, especially those caused by different loads interacting. Use these instruments to record in depth voltage and current information over time, so you can better diagnose and resolve problems.</td>
</tr>
</tbody>
</table>

When?

<table>
<thead>
<tr>
<th>Troubleshooters and analyzers</th>
<th>Loggers</th>
<th>Recorders</th>
</tr>
</thead>
<tbody>
<tr>
<td>Whenever a recurring problem exists (such as overheating transformers and motors, and nuisance tripping of breakers).</td>
<td>When you need to know the loading on a system, or to understand the general quality of service.</td>
<td>When intermittent voltage disturbances or high-speed transients cause problems.</td>
</tr>
</tbody>
</table>

Who?

<table>
<thead>
<tr>
<th>Troubleshooters and analyzers</th>
<th>Loggers</th>
<th>Recorders</th>
</tr>
</thead>
<tbody>
<tr>
<td>On-site electrician or electrical technician.</td>
<td>Power quality specialist, on-site electrician or electrical technician, engineer facilities technicians and high-end electrical contractors, commissioners of new equipment.</td>
<td>Facility manager, plant manager, Industrial engineers and technicians, utility power engineer, power consultants.</td>
</tr>
</tbody>
</table>
