1. Represents an expanded uncertainty using a coverage factor, $k = 2$, at an approximate level of confidence of 95 %.
 2. This capability includes on-site calibration service, as limited by influences of operating environment.
 3. For absolute mode, uncertainties increase by $1.33E + 00$ Pa, combined in quadrature with stated level.
 4. For absolute mode, uncertainties increase by $1.88E + 00$ Pa, combined in quadrature with stated level.
 5. For absolute mode, uncertainties increase by $1.31E + 01$ Pa, combined in quadrature with stated level.
 6. Calibration process may include the use of transducers to measure small differential pressures.
