

POWER LOG 3.2 – RELEASE NOTES

- Supports large files from Fluke 430-II – user can select blocks of data, the size depends on the available memory of the PC.
- Downloads, decodes and displays event profiles and event waveforms (not PowerWave) from 43x-II instruments.
- Supports download from old products (1710, 1735, 345, 434, 435).
- Supports old .qrn/.fpq files.
- Voltage and Current page – Checkboxes' behaviour improved.
- Bug fixing:
 - “Out of memory” error while decoding large files from 43x-II instruments.
 - THD incorrectly initialized. Sometimes led to Access Violations in second or subsequent downloads.
 - Color preferences – Some pages didn't displayed the specified colors.
 - Export data alignment problems.
 - Summary page – Nominal values were incorrect sometimes.
 - Report printing missing file summary information.
 - Rapid Voltage Changes interpreted as absolute instead of relative values.
